No fuss.
Just savings.

FLUKE networks®

Save up to €4000 on selected Copper and Fiber testers for a limited time only.

Join us in celebrating our 30-year anniversary with savings on the leading network testing and certification tools in the industry. Since 1992, Fluke Networks has delivered accurate, fast, reliable, and easy-to-use cable certification testers into the hands of installers and network technicians worldwide.

In 2022, we're celebrating 30 years with exciting offers for you: Our gift to you is a limited-time discount offer (made available through our authorized distributors) on some of our best-selling copper and fiber solutions suited for your needs.

Historically, through its successful trade-in programs, Fluke Networks provided loyal customers with great opportunities to move up to the next generation of testers. Over the years, many customers have taken advantage of this.

However, with our new "No fuss. Just savings" offer, a trade-in isn't required. No returns, registrations, or hassles. Simply contact your local distributor and take advantage of these great discounts.

GOLD SUPPORT

Fluke Networks Gold program

With discounts of up to €4,000 from our authorized distributors' regular prices, the savings are even greater than last year.

Furthermore, if you purchase a bundle that includes Fluke Networks Gold program, you will have an advantage since we want to give our Gold customers something extra (see details of our Gold program here) https://www.flukenetworks.com/content/gold-product-support#

Resolve and prevent your network issues today
with Copper Testers from Fluke Networks.

It is common for companies to expect their twisted pair cabling to operate flawlessly. However, cutting corners during design, installation, or testing causes downtime which costs them resources and revenue. This can be avoided by cable installers that are capable of installing standards-compliant copper cabling systems and have the capability to locate faults quickly.

All the way to Cat. 8 cabling that can support the transmission of data up to 40Gbps over balanced twisted-pair copper cabling, Fluke Networks is the

industry's most trusted partner for cable testing.

The DSX CableAnalyzer™ cable testers provide accurate, error-free certification even in complex projects where multiple teams are involved in the testing process, with varying media types and multiple testing requirements.

The DSX is built on our Versiv™ modular design that supports copper certification, fiber optic loss, OTDR testing and fiber end-face inspection in one.

Fluke Networks
CertiFiber Pro

Accelerate every step of your
Fiber Certification with Fluke Networks.

Fiber optics is the preferred media type for mission-critical links between data centers, backbones within buildings, and networks serving campuses over longer distances. It is increasingly preferred in the marketplace for use with innovative technologies that are required to support exploding bandwidth demands.

As a result, the need for fiber testing and certification has grown at a substantial rate. Fibers have proven to be a cost-effective and reliable transmission medium, but they are susceptible to contamination and link damage. It can be time-

consuming and resource-intensive to narrow down the cause of failure. CertiFiber Pro provides you with an optical loss test set with the fastest time to certify.

Our ProjX™ management system ensures all jobs are completed correctly and efficiently and the optical loss test set provides automatic Pass/Fail analysis to industry standards or custom test limits. Both DSX and CertiFiber are compatible with Linkware™ Live cloud-based service and customers can quickly and easily create professional custom PDF reports with LinkWare™ PC. .
